

Model 30ES-BSL

Model 80ES-BSL

**TWO-IN-ONE**  
**EGRESS / SECURITY LIGHTING**  
**BATTERY SUPPORT LIGHTING**

# ONE LUMINAIRE, TWO FUNCTIONS

## INDUSTRY-UNIQUE DESIGN OFFERS AC AND BATTERY SUPPORT LIGHTING IN ONE PORTABLE LUMINAIRE

UL Listed For Wet Locations  
C-UL Listed For Wet Locations

Patent Pending

### Two functions combining in one portable luminaire offer a totally new lighting concept to the industry.

The AC system with photo control provides low level energy-saving egress or security lighting when the main or overhead lighting is turned off.

An internal battery pack operates the second system, automatically turning on the second lamp, to provide light during a power failure.

## 2+2

### Two systems and two lamps combine in one space-saving, cost-efficient fixture.

Two models available: Model **30ES-BSL** contains two energy-efficient 13PL fluorescent lamps and two dedicated operating systems; Model **80ES-BSL** contains two energy-efficient 42PLT fluorescent lamps and two dedicated operating systems. Model **30ES-BSL** and Model **80ES-BSL** are engineered and designed to decrease installation time and energy cost.

## FUNCTION 1

When the overhead or main lighting is turned off, the photo control automatically turns on its dedicated lamp. Substantial savings can incur by substituting low level egress/security lighting for high level production illumination during minimal operating periods such as holidays and vacations, during non-production shifts, or other scheduled downtime.

## FUNCTION 2

When a power failure occurs, the internal battery pack of the second system automatically turns on the second lamp to help provide safe routing through unlit areas. The battery support lighting will stay on throughout the power outage or for the industry-standard ninety minutes, whichever comes first.

## APPLICATIONS

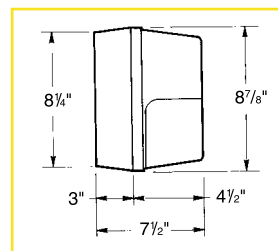

This versatile luminaire is ideally suited as an egress or security light and as battery support lighting during power failures. Applications include, but are not limited to, manufacturing plants, warehouse facilities, and other industrial/commercial buildings.

For applications not requiring a dual-functioning luminaire, Models **30ES** and **80ES** offer egress and security lighting in a handy portable unit; and Models **30BSL** and **80BSL** offer portable battery support lighting. For permanent applications, fixed-mount fixtures are also available. Portable models are equipped with a large heavy-duty mounting magnet, a 6' 18 AWG SJTOW cord, and a three-prong NEMA 5-15 plug. Savings can include additional energy resource efficiencies, reduction in operating overhead, and extending the lamp life of the production luminaires. Automatically activated.

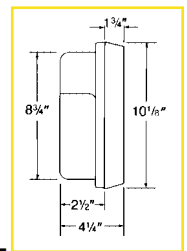

## LIFETIME GUARANTEE

Engineered with materials offering the highest resistance to rust, corrosion, and impact. Lens, housing, and marine-grade aluminum base plate carry a **LIFETIME GUARANTEE**. The polycarbonate housing is lightweight for easy portability, and is non-conductive for safety during mounting and relamping. Smooth polycarbonate exterior lens allows ease of cleaning, clear prismatic interior for optimal lumen output, and rounded corners for increased impact strength and safety. UL Listed. Housing color selections include black, white, bronze, or safety yellow.
